Education

Indian Institute of Technology Roorkee

M.Tech in Artificial Intelligence

Jul 2026 – May 2028 (Expected)

Roorkee, India

IIITDM Kancheepuram

B.Tech in Computer Science and Engineering, Major in Artificial Intelligence

Dec 2021 – May 2025

CGPA: 9.02/10

Summary

M.Tech student in Artificial Intelligence at IIT Roorkee with industry experience building production-grade enterprise automation systems and AI-powered applications. Experienced in Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Agentic AI, FastAPI, and Python. Developed enterprise-scale automation solutions that reduced operational effort by approximately 80%, while pursuing research in trustworthy AI and intelligent systems. Passionate about building scalable AI systems that bridge research and real-world deployment.

Experience

Accenture

Advanced App Engineering Analyst — AI & Enterprise Automation

Oct 2025 – Jul 2026

Hyderabad, India

- Designed and developed AI-powered intelligent agents to automate enterprise workflows, contextual information retrieval, and operational assistance, reducing repetitive manual intervention across infrastructure operations.
- Co-designed a production-grade RHEL patching automation framework in Python for Oracle RAC environments, covering validation, service migration, patch execution, health verification, monitoring, and resumable execution.
- Modernized enterprise Oracle GoldenGate automation by migrating legacy Shell-based workflows to a modular Python architecture, improving maintainability and scalability.
- Independently architected a centralized operations dashboard for real-time automation monitoring, execution tracking, patch status visualization, and failure diagnostics.
- Improved infrastructure patching throughput from 4–6 systems/day (manual) to 15–20 systems in ~3 hours, cutting operational effort by ~80% while improving deployment consistency.
- Implemented production-ready reliability features: structured logging, checkpoint-based recovery, automated notifications, execution reporting, and robust error handling.

Vizzhy Inc (Hanooman.ai)

Artificial Intelligence Intern

May 2024 – Oct 2024

Bangalore, India

- Fine-tuned and evaluated Large Language Models (LLMs) for domain-specific applications, improving response quality and task performance.
- Designed automated data collection and preprocessing pipelines using Selenium and BeautifulSoup, enabling scalable web scraping and content enrichment.
- Developed scalable backend services using FastAPI for the DARPG project, implementing REST APIs for user management and data retrieval.
- Contributed to the Hanooman.ai beta platform, improving interface usability, backend functionality, and overall system performance.

Projects

NyayaMitra – RAG-based Legal AI Assistant | *Python, FastAPI, RAG, Phi-3 Mini, Milvus, BAAI/bge-large-en, GCP* | [GitHub](#)

- Built an AI-powered legal assistant integrating LLMs, Retrieval-Augmented Generation (RAG), legal document summarization, and fake legal news detection for the Indian judicial ecosystem.
- Built a semantic retrieval pipeline over 200,000+ Indian court judgments using BAAI/bge-large-en embeddings and Milvus, enabling context-aware precedent retrieval and legal question answering.
- Fine-tuned Phi-3 Mini on Indian legal text using LoRA/PEFT for parameter-efficient adaptation, significantly reducing training compute and memory requirements while preserving model quality for domain-specific legal QA.
- Deployed the system on Google Cloud for web and mobile accessibility; achieved up to 70% reduction in legal research time versus traditional workflows. Work published at the 10th International Conference on Mining Intelligence and Knowledge Exploration (MIKE 2025).

AI-Powered Scam Detection & Automated Investigation System (Section 91 CrPC) | *Python, FastAPI, Azure OpenAI (GPT-4o), RoBERTa, Transformers* | [GitHub](#)

- Developed an AI-powered investigation platform aligned with Section 91 CrPC, using GPT-4o and RoBERTa to analyze chat conversations, detect potential scammers, and generate structured digital evidence.
- Engineered an information-extraction pipeline transforming unstructured chat logs into structured entities: identities, phone numbers, financial information, and transaction details.
- Built AI-driven decoy conversation agents to autonomously engage suspected fraudsters, maintain contextual conversation history, and collect behavioral intelligence for cybercrime investigations.
- Designed and implemented a scalable backend with 40+ FastAPI REST APIs integrating AI inference, workflow automation, and automated email notifications for telecom operators, banks, and digital platforms.

Research Publication

AI-Powered Legal Assistant and RAG-Based Case Retrieval System — Published and presented at the 10th International Conference on Mining Intelligence and Knowledge Exploration (MIKE 2025). (See NyayaMitra project above for technical details.)

Technical Skills

AI/ML: LLMs, Agentic AI, Retrieval-Augmented Generation (RAG), Fine-tuning (LoRA, PEFT), Machine Learning, Deep Learning, NLP, Prompt Engineering

Frameworks: PyTorch, TensorFlow, Hugging Face, LangChain, LangGraph, Scikit-learn, FastAPI, Flask

Programming: Python, C++, C, SQL, TypeScript

Cloud & DevOps: Google Cloud Platform (GCP), Docker, Kubernetes, Git, Linux

Databases: MySQL, Milvus, FAISS

Enterprise: Oracle RAC, Oracle GoldenGate, REST APIs, Microservices, Linux Automation

Open Source & Independent Projects

cp-snippets | *Python, PyPI, MkDocs* | [PyPI](#) · [GitHub](#)

- Authored and published an open-source Python library of reusable competitive-programming snippets (arrays, DP, graphs, strings, trees, bit manipulation, modular arithmetic) for ICPC/Codeforces/LeetCode/GATE preparation.
- Organized the library into topic-based modules with clear docstrings and time-complexity notes; auto-generated and deployed API documentation via MkDocs and GitHub Actions.
- Released as an MIT-licensed pip-installable package with versioned releases on PyPI.

Smart Expense Tracker | *Flutter, SQLite* | [Google Play](#)

- Built and published a fully offline, privacy-first personal finance Android app using Flutter with a local SQLite backend — no ads, no sign-up, and no data collection.
- Implemented expense categorization, date/category/location filters, and auto-generated charts for visual spending analysis, along with CSV export for backups.
- Designed a balance and income-vs-expense summary dashboard with category-wise breakdowns (Personal/Family).

Achievements & Leadership

- Secured AIR 253 in GATE 2024 (Data Science & Artificial Intelligence) with a score of 712; qualified GATE in Computer Science (2024, 2025, 2026) and Data Science & AI (2024, 2025).
- Published research on **AI-Powered Legal Assistant and RAG-Based Case Retrieval System** at the **10th International Conference on Mining Intelligence and Knowledge Exploration**.
- Served as a Teaching Assistant for Data Structures, Computer Organization, and Digital System Design, mentoring 100+ students through tutorials, lab sessions, and doubt-clearing sessions.
- Served as Placement Cell Coordinator, IIITDM Kancheepuram, coordinating placement activities between students and recruiters.
- Founded and led the Developers Club at IIITDM Kancheepuram, organizing Vashisht Hackathon and Vashisht Hackathon 2.0.
